

Beach Resorts and Pool Safety & Security for Hotels

Both Supplemental Audit modules are part of the **Global Lighthouse Certification Program**. We check if safety & security is provided for leisure travellers adequately. Obtaining the new module-based certifications can help hotel operators to bring safety & security to the next level. Sky Touch developed the new modules to share best practices from round the world with the hospitality industry.

The Beach as well as the access point to the Beach is a vulnerable area. Sky Touch developed 16 selected criteria in response to the increasing risk factors coming from the Beach.

After the active-shooting incidents in recent years, hotels have implemented different counter-measures and various solutions were trialled to keep guests safe. We audit the status-quo and evaluate the different safety components of each site. From a safety perspective, we also carry out an evaluation of the **Tsunami Evacuation Concepts** and **Life-saving equipment**.

The following aspects are covered in this module:

- **CPTED** - *Crime Prevention Through Environmental Design*;
- Surveillance;
- Emergency response plans;
- Life-saving equipment;
- Security awareness of staff;
- Tsunami Evacuation Plan;
- Drills, live- and desktop exercises;
- Risk management.

Sky Touch identified 18 global best practices for hotel swimming pools.

This audit is useful for existing brand standard compliance audits, or as a tool in the design stage of a new property. It is tailored for indoor and outdoor pools in hotels & resorts and the following aspects are covered:

- Life-saving equipment;
- Safety signage;
- Pool regulations;
- Safety for children;
- Use and storage of chemicals;
- Security control measures;
- Emergency response plan;
- Risk management.

Both modules are available individual and in combination with the Global Lighthouse Certification Program. For more information visit www.hotelsecuritydesign.com
