Safety & Security Certification

Global Lighthouse Serviced Apartment Edition

Serviced Apartments

New Edition from the Global Lighthouse Certification Program series

Serviced Apartments are managed and operated similar to Hotels.

Serviced Apartments come with a lot of extra feature a hotel can't provide, such as a fully equipped kitchen or a laundry facility in each room.

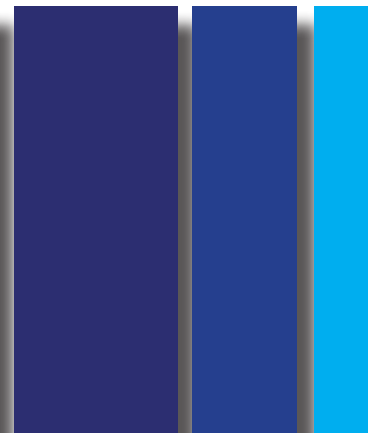

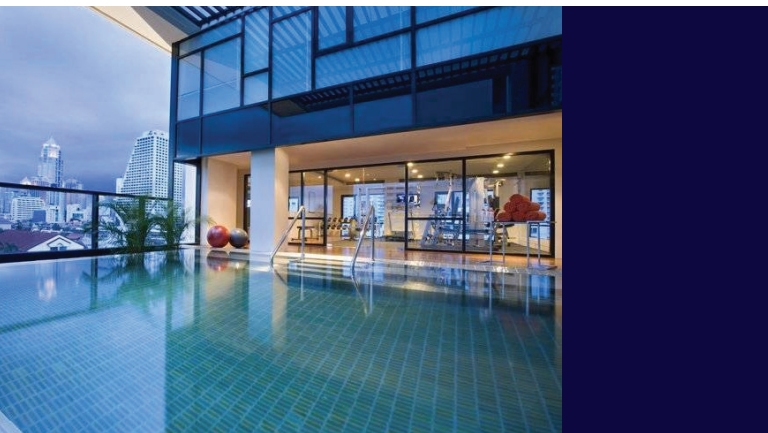

We have assessed the risks in this market segment and compiled Global Best Practices in a new audit catalogue.

Access Control and Emergency Procedures are the main areas of concern. Sky Touch issues a certification if the property complies with the global expectation of travellers.

The audit includes **96 accreditation criteria**, with a similar process to the traditional Sky Touch Hotel Audit.

Identifying & Mitigating Travel Risks

1. Safety & Security Management;
2. Workplace Health & Safety;
3. Access Control Management;
4. Sky Touch's Child Safety Barometer;
5. Kitchen Fire Safety Check;
6. Balcony Height
7. Security Car Park Facility;
8. Guest Identity Protection;
9. Security at night;
10. Perimeter Security
11. Pool Safety & Security.

It includes an evaluation of the swimming pool at the facility. Child Safety & Security is hereby our primary key focus and discribed further in our **Hotel Swimming Pool Safety & Security** Add-on Module.

Safety & Security as a marketing Insurment

The program is designed to reduce risk. It also helps Serviced Apartment Management to target their market by using recognised global standards. Using this security certification as a marketing tool can positively benefit the bottom line.

Serviced Apartments gain an advantage by choosing a proactive position and showing their customers that they are providing world class safety & security. When the Serviced Apartment becomes a certified safe haven, Travel and Risk Managers will be quick to give it preferred status.
