Beach Resorts and Pool Safety & Security for Hotels

Both Supplemental Audit modules are part of the Global Lighthouse Certification Program. We check if safety & security is provided for leisure travelers adequately. Obtaining the new module-based certifications can help hotel operators to bring safety & security to the next level. Sky Touch developed new modules to share best practices from around the world with the hospitality industry.

Beach Resorts Safety & Security CERTIFIED

The Beach, as well as the access point to the Beach, is a vulnerable area. Sky Touch developed 16 selected criteria in response to the increased risk factors coming from the Beach.
After the active-shooting incidents in recent years, hotels have implemented different counter-measures, and various solutions were trialed to keep guests safe. We audit the status-quo and evaluate the safety components of each site.
From a safety perspective, we also assess the Tsunami Evacuation Concepts and Life-saving equipment.

The following aspects are covered in this module:

- **CPTED** - *Crime Prevention Through Environmental Design*;
- Surveillance;
- Emergency response plans;
- Life-saving equipment;
- Security awareness of staff;
- Tsunami Evacuation Plan;
- Drills, live- and desktop exercises;
- Risk management.

Pool Safety & Security Standards CERTIFIED

Sky Touch identified 18 global best practices for hotel swimming pools. This audit is useful for existing brand standard compliance audits or a tool in the design stage of a new property. It is tailored for indoor and outdoor pools in hotels & resorts, and the following aspects are covered:

- Life-saving equipment;
- Safety signage;
- Pool regulations;
- Safety for children;
- Use and storage of chemicals;
- Security control measures;
- Emergency response plan;
- Risk management.

Both modules are available individual and in combination with the Global Lighthouse Certification Program. For more information visit www.hotelsecuritydesign.com
