Safety & Security Certification

Global Lighthouse Serviced Apartment Edition

Serviced Apartments

New Edition from the Global Lighthouse Certification Program series

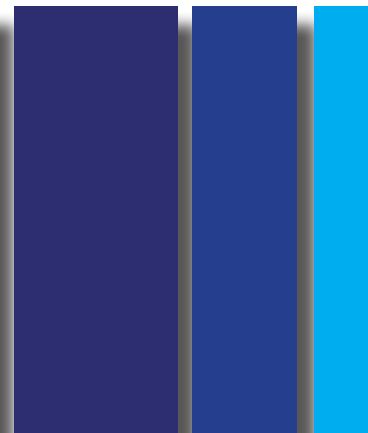

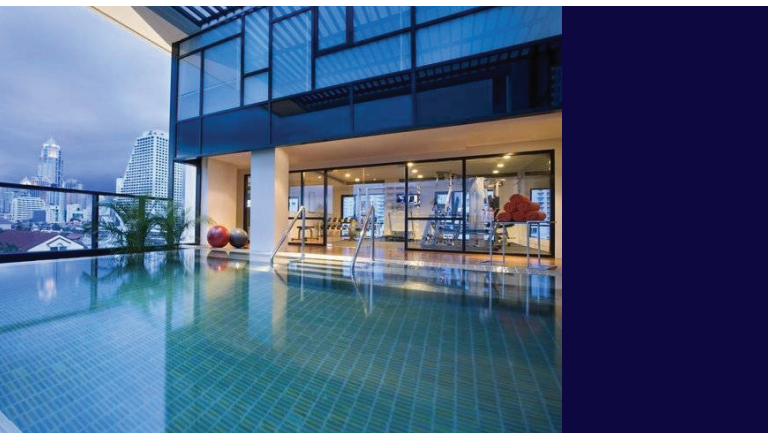

Serviced Apartments are managed and operated similar to Hotels. Serviced Apartments come with many extra features a hotel can't provide, such as a fully equipped kitchen or a laundry facility in each room.

We have assessed the risks in this market segment and compiled Global Best Practices in a new audit catalog. Access Control and Emergency Procedures are the main areas of concern.

Sky Touch issues a certification if the property complies with the global expectation of travelers. The audit includes 96 accreditation criteria, with a similar process to the traditional Sky Touch Hotel Audit.

Identifying & Mitigating Travel Risks

1. Safety & Security Management;
2. Workplace Health & Safety;
3. Access Control Management;
4. Sky Touch's Child Safety Barometer;
5. Kitchen Fire Safety Check;
6. Balcony Height
7. Security Car Park Facility;
8. Guest Identity Protection;
9. Security at night;
10. Perimeter Security
11. Pool Safety & Security.

It includes an evaluation of the swimming pool at the facility. With this, child Safety & Security is our primary key focus and described further in our Hotel Swimming Pool Safety & Security Add-on Module.

Safety & Security as a marketing Instrument

The program is designed to reduce risk. It also helps Serviced Apartment Management to target their market by using recognized global standards. Using this security certification as a marketing tool can positively benefit the bottom line.

Serviced Apartments gain an advantage by choosing a proactive position and showing their customers that they provide world-class safety & security. When the Serviced Apartment becomes a certified safe haven, Travel and Risk Managers will be quick to give it preferred status.
